Frontend Task @lobos

Task Description

Recreate the provided design using HTML / CSS / JavaScript, as faithfully to the original as possible.

- Use Angular (version 19 or newer, with it's new functions) as the JavaScript framework.
- All necessary assets are provided.
- Product data must be extracted from the provided JSON files.
- Apply hover effects, transitions, and fades as you see fit.
- Icons, buttons, etc., only need to be graphically implemented - no actual functionality is required (placeholders are sufficient).

   Optional/Nice to Have:
- Responsive/Mobile support at your discretion.
- Use vanilla JavaScript to implement the image slider (not Angular libraries).

Data

You will work with the following JSON files:
   · **products.json** – Product metadata
   · **price.json** – Price per SKU

Implementation Details

Main Product Display

Render the product with the **SKU GOA535** as the **primary item**.

Product Slider

The slider should include products listed under the relatedProducts attribute (from the JSON data).
Sort them by price, with the highest priced product first.

Assets

All required assets (e.g., images, icons, and other visuals) are included with this task package.

Timeline

You must complete the task **within 7 days** of receiving the assignment.
